Optimal lighting for every camera position

Procemex Eco is a powerful Smart camera controlled stainless steel strobe LED light. It is a perfect Partner for Procemex Pinhole Camera. Eco Led lights can be used **in all web monitoring camera positions.**

Procemex smart cameras control the strobe lighting automatically to match the camera frame rate. Camera shutter speed automatically controls the length of each light pulse resulting in the strobe light illumination only when the camera is filming. Strobe lighting and new super light sensitive CMOS sensor technology, results in camera exposure times of 5 – 20 Microseconds freezing paper movement effectively, and producing crystal clear images.

Procemex Eco Led Lights are energy efficient. The strobe lighting uses just an average of 30W compared to 400 – 500 W standard metal halide light, thus eliminating heat and energy consumption problems.

Choosing the right light type for each camera position

Procemex Eco Led Wide (PX7264) provides broader light coverage, making it perfect for situations where a wider field of illumination is needed.

Procemex Eco Led Spot (PX7275) is ideal for camera positions that require precise, targeted illumination, allowing for detailed inspection of specific areas.
